

OBJECTIVES

Environment – Sustainable Development

Understand the relationship between the environment and sustainable development

Know the current situation of resource degradation, environmental pollution and the impact of environmental pollution in Vietnam today

Solving the problem of natural resources and environment

Aware of the Government's efforts in solving natural resources and environment issues, implementing relevant national programs for sustainable socio-economic development

Vietnam Maritime University

Green Building

• Green building (sustainable building) refers to a structure and using process that is environmentally responsible and resource-efficient throughout a building's life-cycle: from concept to design, construction, operation, maintenance, renovation, and demolition.

Objective

- The common objective is that green buildings are designed to <u>reduce the overall impact</u> of the built environment on <u>human health and the natural environment</u> by:
- Efficiently using energy, water, and other resources
- Protecting occupant health and improving employee productivity
- Reducing waste, pollution and environmental degradation

Objectives for sustainable buildings

- Resource efficiency
- Energy efficiency
- Pollution prevention (including indoor air quality and noisy abatement)
- Harmonization with the environment (including environmental assessment)
- Integration and systematic approaches (including environmental systems)

What is Sustainable Construction

- Social progress, which recognises the needs of everyone
- Effective protection of the environment
- Prudent use of natural resources, and
- Maintenance of high and stable levels of economic growth and employment

Defining Sustainability

Sustainability can be defined using the following comparison:

Traditional Criteria

Performance

Quality

Cost

Sustainability Criteria

Resource depletion

Environmental degradation

Healthy environment
